bed for any room!

Hardness is one of the simplest ways to distinguish the wood used for furniture. Contrary to the popular belief, hardwood is not necessarily harder and denser compared to softwood. In botanical terms, hardwood comes from flowering trees while softwood comes from conifers. Both hardwood and softwood are used for everything from structural to decorative purposes.

Hardwood comes from Angiosperms such as maple, oak, and walnut. These trees lose their leaves annually (deciduous or broad-leafed trees). As they grow slowly, hardwood has denser wood fibers (fiber tracheids and libriform fibers).

WOODS OFFERED:

Birch

1. Durability & Strength

Birch is a **hardwood**, known for being **strong, stable, and long-lasting**. It resists warping and is less likely to crack or splinter over time. Great for **heavy-use furniture** like beds, cabinets, and desks.

2. Smooth, Even Grain

Birch has a **fine, even grain** that gives furniture a **clean and modern look**. Takes paint and stain exceptionally well, allowing for **versatile finishes**. Can be left natural for a light, Scandinavian aesthetic, or stained to mimic higher-end woods like walnut or cherry.

3. Workability

Easy to machine, sand, and finish, making it ideal for **custom or handcrafted furniture**. Holds nails, screws, and glue very well—important for structural integrity.

4. Affordability

More **cost-effective** than many hardwoods like oak, maple, or cherry. Offers a high-end look without the high-end price tag.

5. Sustainability

Birch trees grow relatively quickly and are abundant in North America and parts of Europe. Often considered a **sustainable and eco-friendly** wood option when sourced responsibly.
